

## Environmental Operating Specifications & Compliance Statement

---

This document serves as the official formal statement regarding the environmental deployment standards required for Sound Control Technologies (SCT) equipment. To ensure long-term operational integrity, system reliability, and adherence to manufacturing warranty standards, the specified equipment must be maintained within the environmental thresholds outlined below.

### Environmental Specifications

---

Sound Control Technologies solutions are engineered to deliver premium performance under specific environmental constraints. The hardware must be installed and operated strictly within the following environmental parameters:

Environmental Metric	Operational Operational Range
<b>Operating Temperature</b>	0°C to 35°C (32°F to 95°F)
<b>Operating Humidity</b>	20% to 90% Relative Humidity (RH)
<b>Condensation</b>	Non-Condensing environment required

### Deployment Considerations

---

When integrating SCT solutions into architectural infrastructure, commercial AV racks, or enclosed environments, please ensure proper ventilation and thermal management are provisioned. Standard cooling mechanisms should be deployed to prevent ambient conditions from exceeding the maximum thermal limit of 35°C.
